

After cloning the git repository, startup eclipse. Make sure that all the plug-ins are needed for the Android (see the Google Android SDK page).

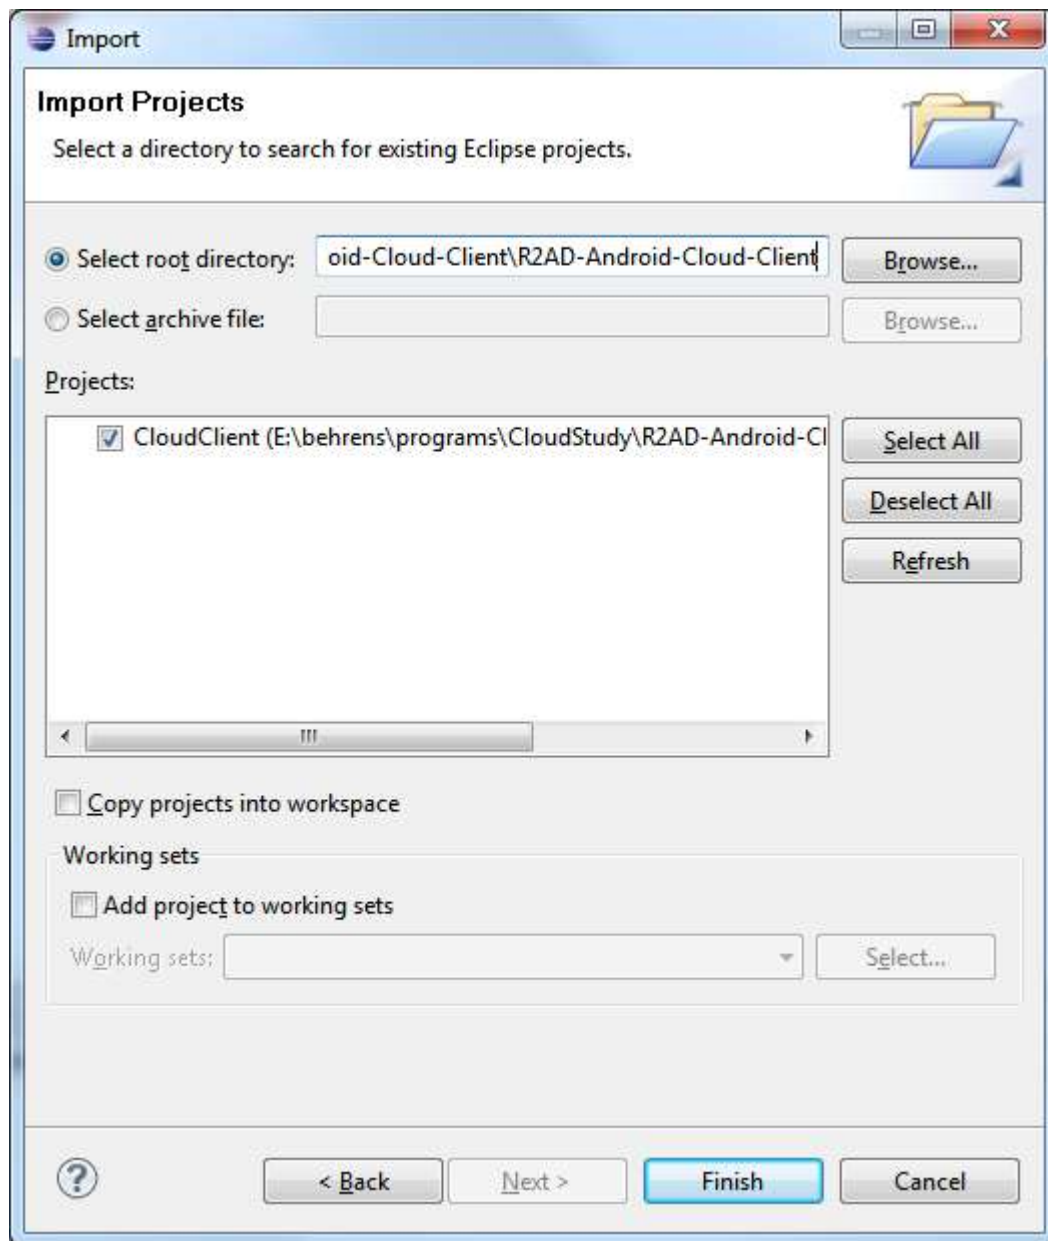

<http://developer.android.com/sdk/index.html>

Also, for a good tutorial on Android Development, check out:

<http://www.javapassion.com/portal/android-programming-with-passion/android-programming-with-passion>

Then, import the project:

Leave default options. Then, the project can be compiled and executed.

Use the Menu button to active the option to create an account....
